

On the Nonequivalence of Two Integral Definitions

SUN/151-1000

and if there exists  $\lim_{n \rightarrow \infty} I_n$ , then it is called the Riemann integral of  $F(x)$ :  $I = \lim_{n \rightarrow \infty} I_n$ .

At the other hand, on the set  $S$  of finite sets  $x_1, x_2, \dots, x_n$  such that  $a_i < x_i < b_i$ , the measure

$$\mu_n(S) = \left(\frac{n}{\pi}\right)^{\frac{1}{2}} \int_{a_1}^{b_1} \dots \int_{a_n}^{b_n} e^{-\sum (x_i - x_{i-1})^2} dx_1 \dots dx_n = \int_{a_1}^{b_1} \dots \int_{a_n}^{b_n} e^{-\sum (x_i - x_{i-1})^2} d\mu_n$$

can be defined. According to Lebesgue the measure  $\mu_n$  can be continued to the Borel closure of  $S$ , whereby the Lebesgue integral is defined

$$I_L = (L) \int F(x) d\mu.$$

Thus we have

$$I = \lim_{n \rightarrow \infty} \int F d\mu_n$$

Card 2/3

On the Nonequivalence of Two Definitions of Sov. I. Fomin

$$I_L = \int F d \lim_{n \rightarrow \infty} \mu_n$$

Under certain assumptions S.V.Fomin stated that  $I_L \leq I$ . The author constructs an example with

$$I_L < I$$

wherefrom there follows the nonequivalence of both definitions.  
The author thanks L.A.Chudov.

TITLE: On a Graphic Method in the Kinematics of the Collision of two Particles (Ob odnom graficheskem metode v kinematike stolknoveniya dvukh chashtits)

PERIODICAL: Nauchnyye doklady vysshey shkoly. Fiziko-matematicheskiye nauki, 1958, Nr 4, pp 129 - 134 (USSR)

ABSTRACT: Let  $m_{-1}$ ,  $m_{-2}$  and  $a_{-1}$ ,  $a_{-2}$  be the rest masses and velocities of the particles  $\gamma_{-1}$ ,  $\gamma_{-2}$  before the collision. Let  $m_1$ ,  $m_2$  and  $a_1$ ,  $a_2$  be the rest masses and velocities of the corresponding particles  $\gamma_1$ ,  $\gamma_2$  after the collision. The collision  $\gamma_{-1}$ ,  $\gamma_{-2} \rightarrow \gamma_1, \gamma_2$  is considered according to the scheme  $\gamma_{-1}, \gamma_{-2} \rightarrow \gamma_0 \rightarrow \gamma_1, \gamma_2$ . At first in the velocity space (a Lobachevskiy space)  $m_0$  and  $a_0$  are determined from  $\gamma_0$ . The interval  $a_1 a_2$  contains  $a_0$ ; let  $\beta_1 = a_0 a_1$ ,  $\beta_2 = a_0 a_2$ . The geometric position of the possible positions of  $a_1$  (and  $a_2$ )

Card 1/3

On a Graphic Method in the Kinematics of the  
Collision of two Particles

SOV/155-58-4-21/34

respectively) is a sphere  $\sigma_1$  (and  $\sigma_2$  respectively) with the radius  $r_1$  (and  $r_2$  respectively) and the center  $a_0$ . In a similar way  $w = \frac{E}{p}$  (the ratio of the kinetic energy of the particle to its impulse) can be graphically determined as the length of a certain circular secant. For the determination of the circular radius and of some other initial data for the construction the values of the functions

$$\Psi(x,y) = \sqrt{\frac{(1-x)^2 - y^2}{(1+x)^2 - y^2}} \quad \text{in } x \geq 0, y \geq 0, x + y \leq 1 \quad \text{and}$$

$$F(u,v) = \frac{u(1-v^2)}{1-u^2-v^2} \quad \text{in } 0 \leq u \leq 1, 0 \leq v \leq 1$$

are needed. Corresponding tables of values are set up in the

AUTHORS: Maykov, Ye. V., Fomin, S. V.

TITLE: Difference schemes and measures in functional space

PERIODICAL: Akademiya nauk SSSR. Doklady, v. 149, no. 3, 1963, 525 - 528

TEXT: The Cauchy problem  $\frac{\partial u}{\partial t} = Lu$ ,  $u(0, x) = \varphi(x)$  (1), where  $L$  is a linear differential operator and  $\varphi(x)$  is a continuous bounded function, is written in the difference form  $u_{i+1,k}^m = \sum_{j=-\infty}^{\infty} a_{ijk}^m u_{ij}$ ,  $u_{0k}^m = \varphi_k^m$  (7).

This system may be solved in the form  $u^m(t, x) = \sum_{\gamma(\tau) \in A} \varphi_{k_0}^m p_m[\gamma(\tau)]$  (8).

In the functional space  $\Omega = \Omega_0^{t,x}$  the sequence of measures  $u_m(A) = \sum_{\gamma(\tau) \in A} p_m[\gamma(\tau)]$  (9) is introduced for any  $A \subset \Omega$ . The following two theorems are derived: 1. If the difference scheme is uniformly

Card-1/2

S/020/63/149/003/004/028  
B112/B180

Difference schemes and ...

stable, then the corresponding sequence of measures is T-convergent.  
2. The sequence (9) converges weakly if and only if it is T-convergent  
and compact.

*Effect of riboflavin on the assimilability of some fats in mixed food ration. O. P. Milková. *Zhurn. Československ. Svet. Ciger. a Med.-Inst.*, 14, 144-56 (1953).—Clinical tests were made on the effects of riboflavin on the assimilation of fats (butter, margarine, sunflower oil) by human subjects. Intake of more than a normal amount of riboflavin (5 mg.) with protein intake of more than 66-70 g., results in an increased assimilation of fats: butter by 3-5, margarine by 3-2, vegetable oil by 2-4%. Similar results are found after intake of 100 g. of yeast or 5 mg. riboflavin taken in several portions during a day.*

TITLE: Effect of elastase on the lipid metabolism of arteriosclerotic patients

SOURCE: Kiserletes Orvostudomany, v. 17, no. 1, 1965, 35-39

TOPIC TAGS: experiment animal, cardiology, biochemistry, cardiovascular system,  
pathology

Elastase, 1-2 dragees three times daily

ABSTRACT:  
for six weeks, was given to 30 patients with severe arteriosclerosis and hypertension. The influence of elastase on their lipid metabolism has been investigated. The results can be summarized as follows. An average 17 per cent drop in the cholesterol level followed. The amount of ketone bodies showed a mean increase of 15 per cent initially, with a subsequent normalization. The arteriosclerotic index (mg % cholesterol / mg % ketone bodies) that was higher than normal before the treatment dropped to nearly normal values following it. A 36 per cent decrease in the amount of elastase inhibitors was effected by the treatment. The results of the investigations led to the conclusion that elastase can play a role in lipid metabolism.

"Relationship Between Fluorescent Substances and Arteriosclerosis."

Budapest, Acta Physiologica Academiae Scientiarum Hungaricae, Vol XXX,  
No 1, 1966, pages 79-89.

Abstract: [English article, authors' English summary modified] a) Specific fluorescence was studied in the collagen and elastin fractions of normal and sclerotic human aortas. Measurements were made at 365  $\mu\text{m}$  with a Hilger spectrophotometer and appropriate adapter. The specific fluorescence of sclerotic aortas was considerably higher than that of normal aortas. b) Fluorescence of the protein of sclerotic aortas was increased two-fold in the collagen fraction and four-fold in the elastin fraction. When elastin was separated into two subfractions, the one better soluble with elastase was found to contain seven times as much fluorescent material as the normal aortic wall. The elastase-resistant fraction showed a three-fold elevation. c) Study of the relationship between extent of arteriosclerosis and fluorescence revealed that both total fluorescence and that of individual fractions showed a sudden increase at the time of appearance of the sclerosis without further elevation which would have been proportional to the degree of sclerosis later. 1 Hungarian, 12 Western references. [Manuscript received 10 Jun 65.]

"Fluorescence Measurements on Aorta-Elastolyzates by Using Gel Filtration."

Budapest, Kiserletes Orvostudomany, Vol XIX, No 1, Jan 67, pages 40-47.

Abstract: [Authors' Hungarian summary] The extracts of sclerotic and normal aortas, obtained with elastase, were separated by gel filtration and their activated fluorescence was studied at 385 m $\mu$ . The fluorescent material which is increased in sclerosis was concentrated in the large molecular weight fractions. These fractions do not contain desmosins in the free state. The small molecular weight fractions, in which the desmosins are found, exhibited weak fluorescence. The fluorescence measured was greatly decreased by hydrolysis. Since the desmosins can be isolated from the hydrolyzate, this would also indicate that not these components had been studied but some other, previously unknown fluorescent material. 2 Hungarian, 13 Western references.

"Study of the Fluorescent Material of Sclerotic Human Aortic Walls."

Budapest, Kiserletes Orvostudomany, Vol XVIII, No 2, Apr 66, pages 189-197.

Abstract: [Authors' Hungarian summary] The specific fluorescence of the collagen and elastin fractions of the aortic wall of normal (child and young adult) and arteriosclerotic humans was compared. The measurements were made with the adapter of a Hilger spectrophotometer using 365 m $\mu$  exciting filter. It was found that, in comparison with the normal aorta, there was a large increase in fluorescence values in the arteriosclerotic ones. The mean deviation was two-fold in the collagen fraction and four-fold in the elastin fraction. In the two separated fractions of elastin, the fluorescence values of the highly elastase-soluble fraction were seven-fold, those of the more resistant fraction were about three-fold in comparison to the normal aorta. The study of the correlation between the degree of arteriosclerosis and the fluorescence indicated that the total fluorescence as well as the fluorescence of individual fractions increases steeply and rapidly with the appearance of arteriosclerosis. With increasing severity of the sclerosis, there is no proportional further increase in fluorescence. 1 Hungarian, 13 Western

SOURCE: Academia scientiarum hungaricae. Acta physiologica, v. 27, no. 2, 1965, 179-185

TOPIC TAGS: circulatory system disease, blood pressure, ketone, biologic metabolism,  
drug treatment

ABSTRACT: Thirty patients with severe arteriosclerosis and hypertension were given 3 x 1 and 3 x 2 elastase pills daily for 6 weeks, in order to determine whether lipid metabolism can be influenced with elastase. The results revealed an average drop of 17 per cent in the level of cholesterol. The number of ketone bodies increased by an average of 14 per cent, that is, they became normalized. The arteriosclerotic index (cholesterol mg per cent/ ketone bodies mg per cent) which was elevated before the treatment, was nearly normal following it. As a result of the treatment, a 36 per cent increase was observed in the elastase inhibitor values. On the basis of the experimental results it is assumed that elastase does play a role in lipid metabolism.

TITLE: Selection rules for nuclear reactions involving nucleon associations in the SU(3) scheme 19,44,55

SOURCE: Yadernaya fizika, v. 2, no. 3, 1965, 427-432

TOPIC TAGS: nuclear reaction, nucleon interaction, selection rule, quantum number, radioactive decay scheme, alpha particle, alpha decay

**ABSTRACT:** The authors examine selection rules according to approximate models of quantum numbers in the SU(3) scheme. Selection rules are formulated for nuclear reactions involving associations according to quantum numbers in the SU(3) scheme, widely used in light nuclei spectroscopy. It is shown that these selection rules in some cases lead to very rigid restrictions, which makes it easy to check them experimentally. For example, the reaction of quasi-elastic knock-out of an Alpha-particle from the nucleus  $O^{16}$  by a fast particle  $\alpha$ :  $O^{16} (\alpha, \alpha) C^{12}$ , accompanied by  $\alpha$ -decay of  $C^{12} \rightarrow 3\alpha$ , is possible only through the  $\sim 12$ -MeV level  $[1g_9^- 1p_1^- [444] 4^+]$  of the nucleus  $C^{12}$ . Furthermore, in the stripping reactions  $O^{16} (Li, Li) Ne^{20}$ , the only levels of the configuration  $(1d-2s)^*$  which can be excited are those of the lowest rotational series  $O^+, 2^+, \dots$ , based on the ground state of  $Ne^{20}$ .

TITLE: A possible interpretation of experiments on inelastic scattering of fast protons from light nuclei

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 42,  
no. 3, 1962, 831-832

TEXT: The author seeks an explanation of the splitting of the 20-Mev level observed by Tyren and Maris in inelastic scattering of 180-Mev protons from light nuclei. This level is most probably excited by Coulomb interaction of the incident proton with the nucleus resulting in an  $\Delta^1$  transition. The inelastic scattering cross section is calculated in Born's approximation and  $d\sigma/d\Omega = 2(e^2/\kappa c)^2(Mc^2/E)(1/\eta^2)\langle 0 | d_z^2 | 0 \rangle$  is obtained.  $\theta$  is the scattering angle,  $\langle 0 | d_z^2 | 0 \rangle = \sum_n |\langle n, d_z | 0 \rangle|^2$  denotes summation over all electrical dipole transitions,  $d_z = \sum_a z_a$  is a sum over all nuclear protons,  $z | \vec{q}, \vec{q} - transferred momentum$ . This result is obtained

without assuming Coulomb interaction and is equivalent to one found by Sakamoto. The anisotropy in proton scattering ( $\langle \bar{0} | d_z^2 | 0 \rangle \neq \langle \bar{0} | d_x^2 | 0 \rangle$ ) causes a splitting of the resonance peak and is indicative of a deformation of the nucleus:  $\zeta/E_0 = (a^2 - b^2)/k_0^2$ ; 0.146 and 0.234 is obtained for  $C^{12}$  and  $N^{14}$ , respectively. ( $\zeta$  - amount of splitting,  $E_0$  - mean resonance energy,  $a, b$  - half-axes of ellipsoid,  $R_0$  - equilibrium radius of the sphere). A. M. Baldin and F. Yanoukh are thanked for discussions. There are 4 non-Soviet references. The four references to English-language publications read as follows: H. Tyren, Th. A. J. Maris. "One Trace of Basic and Auxiliary Series of Representations of a Complex Unimodular Group," I. M. Gel'fand, M. A. Maymark, 3 pp

"Dok Ak Nauk SSSR" Vol LXI, No 1

Authors' previous articles in "Dok Ak Nauk SSSR" Vol LIV, No 3, LVI, No 1, LVIII, No 8 discussed the basic and auxiliary series of unitary representations of a complex unimodular group . It is, in general, impossible to ascribe traces in the ordinary sense to the operators of such representation, as unitary operators in infinite space. Authors, therefore, consider the group ring instead of the group and deduce formula for traces on this basis. Submitted 29 Apr 1948.

MAYMIN, S. R.

At the Dnepropetrovsk-Mining Institute in Artem Sergeyev from April 1939 to April 1947, the following dissertations were defended in connection with attaining the scholarly degree of Candidate of Technical Sciences (specializing in mining electrical engineering: S. R. Maymin on 15 May 1940 defended a dissertation on the subject "Increasing power factor of mine networks".

The official opponents of this dissertation were Professor N. N. Malov, and Candidate of Technical Sciences Docent V. S. Rakita.

A theoretical investigation was presented of a three-phase asynchronous motor with condensers in the stator circuit. The basic conclusions were checked experimentally. A case of transfer of one phase into the generator system was investigated oscillographically. A system was worked out for directing single-phase mine electric locomotives with condenser motors. The operation of numerous three-phase synchronous motors was investigated under operating conditions in order to increase the power factor in the networks. It was determined to be possible to increase the exciter current up to 20 percent above the normal current. Recommendations were made concerning the personnel to operate such equipment.

"Determining the Power Consumption of a Scraper Conveyer in the Krivbas Iron Mines," A. Dozent S. P. Maymin, Dnepropetrovsk Mining Inst

Prom Energet, No 2, pp 14-15

Scraper conveyers account for 90% of total electric power consumption in Krivbas iron mines. Method of measuring ore obtained in one cycle, length of ~~xx~~ scraping, and power consumption furnishes more accurate results for establishing norms than are obtained by determining consumption from rated power.

AUTHOR: Maymin, S. R.

TITLE: Electric-Energy Consumption at Coal Mines

PERIODICAL: V sb.: Gorn. elektrotehnika, M., Ugletekhizdat, 1957, pp 612-622

ABSTRACT: Methods for determining normal quotas of energy consumption by individual units, by operations, and by individual fields at the coal-industry plants are presented. A substantiation is given for energy-consumption norms per unit yield for combines, coal-cutting machinery, conveyer, electrical tools, and lighting. A formula for the total consumption by the field depending on the yield, conveyer length, and the number and length of blast holes is offered. A method of estimating the energy consumption by large mine customers, such as hoists, water-pumping, and ventilation systems is presented. The influence of the production plan upon per-unit energy consumption is examined. A simplified method of loss estimation is submitted.
